

Security Awareness

Online Training Solution

Leverage our "On-Demand Learning" model to provide security awareness training for your employees.

Trained employees are a critical element of a strong Digital Risk Protection strategy. Utilize our new security awareness channel with drip campaigns to assign ongoing, up-to-date training to your end users.

EDUCATE your users

Stop Ransomware

Enhance your security architecture by improving user recognition of suspicious email messages and ransomware attacks.

Greatly reduces security risks!

Enable Human Firewalls

Empower your employees to stay vigilant on cyber security threats. Continual training scenarios include the following:

- **Handling suspicious e-mail messages**
- **Setting strong, unique passwords**
- **Education on "what if" scenarios**

Available Inside Microsoft TEAMS

The training portal is available from a native application running in Teams. The open platform provides a streaming service for all your technology training, security awareness, HR compliance, and new employee onboarding content.

Assign security training and track completion status!

Configurable Learning Paths by Group

Administrators can combine security training videos to create recommended learning courses for employees by job role or department.

Setup Continual Training Campaigns

Customizable drip campaigns can be used to schedule regular announcements of new security training that links employees to the latest videos on possible threats.

Track Completion Statistics

Monitor training assignments for completion status and automatically notify users who still need to watch required training and pass exams.

Microsoft Security Products Training

The security awareness channel also includes a focused training module for IT administrators that provides an overview and best practices for using all Microsoft security products.

(Intune, Defender, Attack Simulator, Azure ...)
